

LME COURSE WORKBOOK

BUILD WITH CLAUDE CODE

Workbook · 4 modules · 10 pages

Your workbook throughout the course. Two pages per module: ready-made questions and templates to fill in by hand, a checklist, and one concrete step you carry forward.

· Pick it up after each module, and fill it in at your own pace ·

Module 1: Getting started with Claude Code

Before you build something big, get to know the tool itself. Use this module to check your access, set up your folder, and try your hand at your very first project.

Fill in yourself

YOUR ACCESS

Check whether you have a Claude account. If not, write down when you'll create one.

YOUR FIRST PROJECT

Describe in three sentences what you want your very first page to say about you.

YOUR FOLDER

Where on your computer will you save your projects? Write down the name of your folder.

Write straight in the boxes, or paste the question into Claude Code and let it help you along.

Reflection

What is the difference between chatting with Claude and using Claude Code?

What surprised you the most in your first task?

What do you want to use Claude Code for first?

Checklist for Module 1

- ☐ I have a Claude account.
- ☐ I have opened Claude Code and tried it at least once.
- ☐ I have created a folder for my first project.
- ☐ I have had Claude Code create my very first page.

This module's step

Open Claude Code today, and ask it to create one simple page, even if you're not quite sure what it will become.

Module 2: Speaking clearly to Claude Code

The quality of what you get depends on how clearly you ask. Use this module to practise the formula, and to practise asking for one change at a time.

Fill in yourself

YOUR FORMULA

Write a message to Claude Code with context, goal and format for a small project.

ONE CHANGE

Which change will you ask for first in your project?

WHEN SOMETHING GOES WRONG

Write down how you would explain a problem to Claude Code, as you would to a colleague.

Write straight in the boxes, or paste the question into Claude Code and let it help you along.

Reflection

Why is it wise to ask for one change at a time?

What do you do when the result wasn't what you wanted?

How does it feel to read through what Claude Code has done, before you say yes?

Checklist for Module 2

- ☐ I have used the context, goal and format formula at least once.
- ☐ I have asked for one change at a time.
- ☐ I have read through a change before moving on.
- ☐ I have course-corrected when something went wrong.

This module's step

Take a project you've already started, and ask for one clear, specific change today.

Module 3: Build something real

Now you put together what you've learned. Use this module to plan, build step by step, test, and finally publish your project.

Fill in yourself

YOUR PLAN

Write your project in three sentences: what it is, who it's for, and the most important step.

FIRST STEP

What's the simplest, most important part you'll ask Claude Code to build first?

PUBLISHING

What do you think will be the hardest step when your project is published?

Write straight in the boxes, or paste the question into Claude Code and let it help you along.

Reflection

What was it like to test your project yourself, as a stranger would?

What will you improve after the test?

How did it feel to publish something you built yourself?

Checklist for Module 3

- ☐ I have planned my project on a single page.
- ☐ I have built the first, most important part.
- ☐ I have tested the project, on mobile too.
- ☐ I have published, or know exactly how to.

This module's step

Set aside an hour this week to keep building your project, step by step.

Module 4: Safety and good habits

Good habits make it safe to keep building on your own. Use this final module to think through saving, your boundaries, and what you want to build next.

Fill in yourself

SAVING

Have you asked Claude Code to save a version of the project? Write down what happened.

YOUR BOUNDARIES

What kinds of projects will you always read extra carefully before publishing?

YOUR NEXT IDEA

Write down the next thing you want to build with Claude Code.

Write straight in the boxes, or paste the question into Claude Code and let it help you along.

Reflection

What can Claude Code do, and what should still be up to you?

Is there something you're unsure about, that you should ask for help with?

Which idea are you most excited to keep building?

Checklist for Module 4

- ☐ I know how to save a version of my work.
- ☐ I know what I should always double-check myself.
- ☐ I have shared something or asked for help in LME Community.
- ☐ I have written down my next idea.

This module's step

Set aside time in your calendar to start the next project, within two weeks.

Your project is under way

You don't need to see the whole road to take the first step. Come back to this workbook whenever you need a little nudge, reuse the templates, and check things off as you go.

Start small

Pick one project, and use Claude Code on it this week. It's allowed to be simple.

Join the community

Share what you build, and say hi to others taking the course, in LME Community.

I'm cheering you on

Warmly, Renate.

My next step

Write down the one thing you want to continue with after the course.
